## I. INTRODUCTION

The Theater Nuclear Forces Survivability (TNF/S) working subgroup of the Vulnerability Lethality Division (VLD) of the Ballistic Research Laboratory (BRL) was tasked to assess the vulnerability of the Command Post Carrier (M577A1), and to further identify preliminary methods of reducing the carrier's vulnerability to fragmenting munitions. This report documents the first phase of the analysis dealing with a computerized description of the M577A1. A photograph of the vehicle is shown in Figure 1.

Presently, the BRL employs a technique known as COM-GEOM to describe targets. The COM-GEOM technique uses logic-type operators to combine basic geometric solids to produce a three-dimensional model of the target suitable for subsequent analysis. This COM-GEOM description is then used as input to the Geometric Information For Targets (GIFT)<sup>1</sup> computer code. The GIFT code traces shotlines through a COM-GEOM description from many specified attack aspects, listing pertinent information about each component hit. These shotline data are then used as simulated penetrator paths through the target. The vulnerability analysis is then conducted utilizing this shotline data in conjunction with the VAST<sup>2</sup> analysis code.

## II. COMBINATORIAL GEOMETRY METHODOLOGY

Engineering drawings, manuals, photographs or other descriptive materials are required to produce a COM-GEOM description. The COM-GEOM technique utilized basic geometric solids combined under three set-theory type operations to define the shape and location of each component of a target. A complete COM-GEOM description contains three distinct parts: a solid table, a region table and a region identification table.

A solid may be defined by any one of twelve geometric shapes (see Table I). The parameters of a solid give its location, size, and orientation within the coordinate system established for the target. Each solid is uniquely numbered and its parameters listed in the solid table.

Table I. Geometric Solids Used in COM-GEOM Descriptions.

<u>SYMBOLS</u>	<u>SOLID NAME</u>
RPP	Rectangular Parallelepiped
BOX	Box
RAW	Right Angle Wedge
ARB	Arbitrary Convex Polyhedron
ARS	Triangular Surfaced Polyhedron
ELL	Ellipsoid of Revolution
SPH	Sphere
RCC	Right Circular Cylinder
REC	Right Elliptical Cylinder
TRC	Truncated Right Angle Cone
TEC	Truncated Elliptical Cone
TOR	Torus

A region is the space occupied by a single solid or combination of solids. Solids are combined using the three operations; intersection (+), union (OR), and difference (-). The intersection (+) of two solids is defined as the space in common with both solids. The union (OR) of two solids is defined as the space in either of the solids. The difference (-) of two solids is defined as the space in the first solid minus the space of the second solid. Figure 2 is a two-dimensional graphic illustration of these three operations. Any number of solids from the solid table may be used to define a region. Each region is uniquely numbered and its defining combination of solids is listed in the region table.

In the region identification table, each region is assigned an identification code number. These code numbers either identify each specific region as a component of the target or as an air space. Table II lists the groups of code numbers used in this description and the class of components which they represent. The region identification table also allows 40 alphanumeric characters of descriptive data per item listed. The analyst needs to know the type and percentage of material making up each region. The percentage value is used to produce

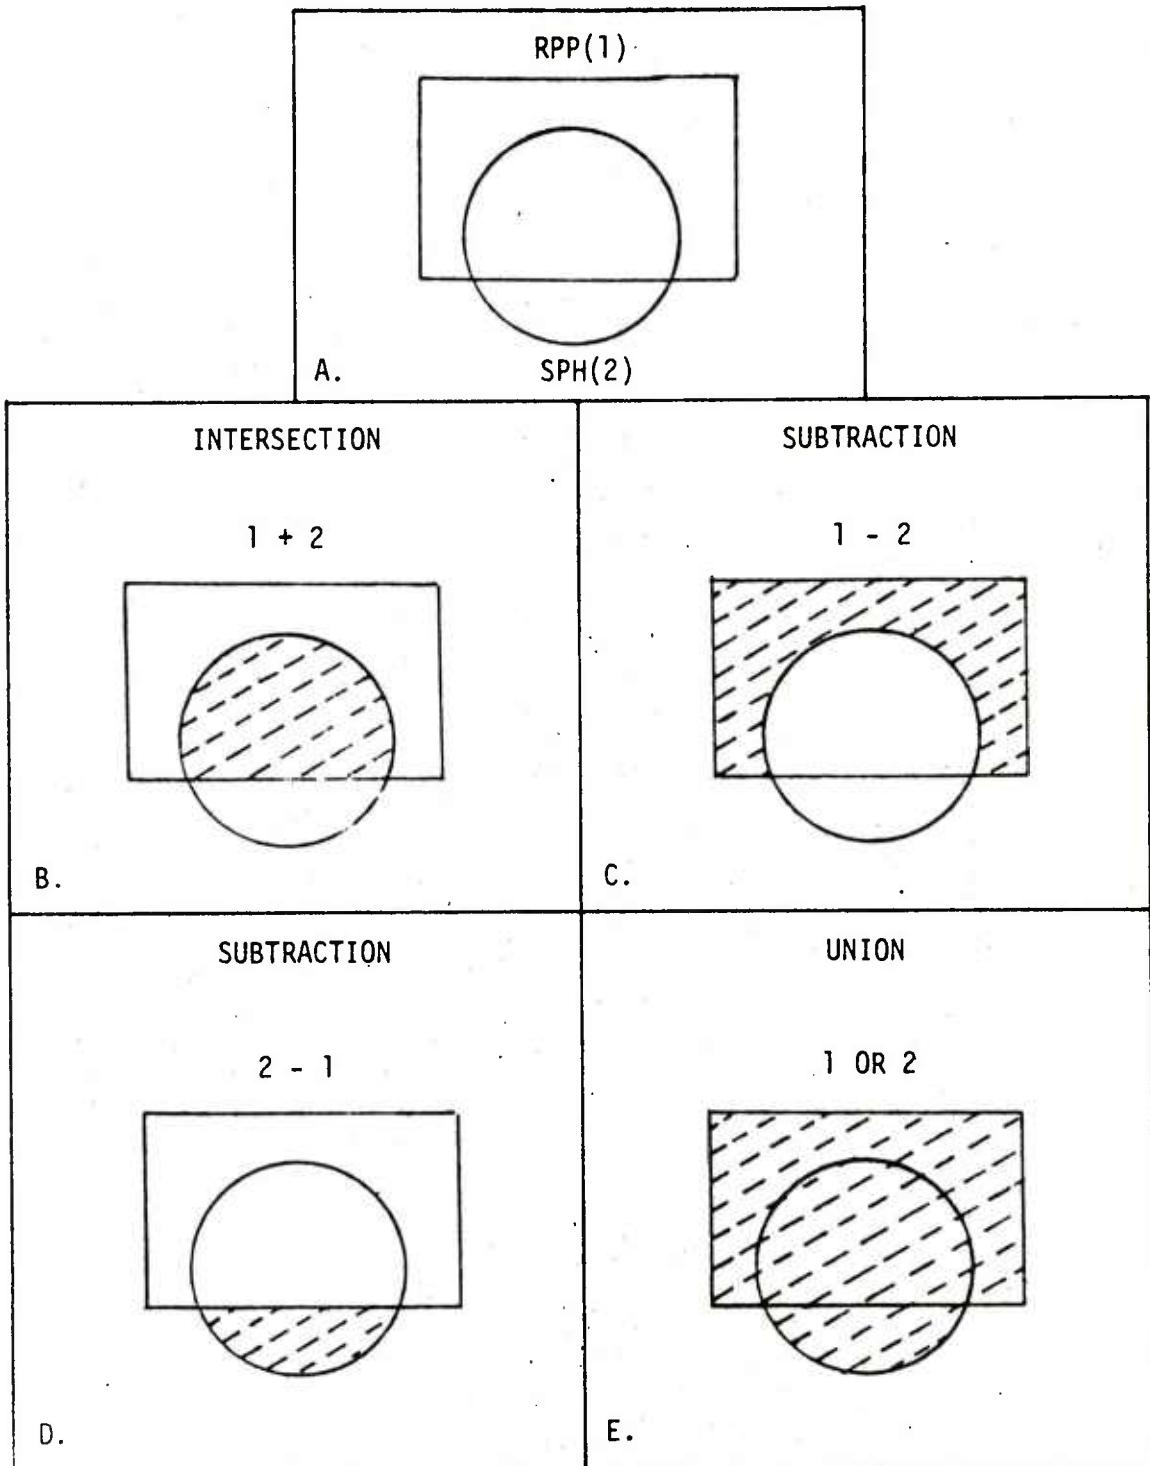

Figure 2. Intersection (+), Subtraction (-), Union (OR) of Solids

an equivalent line-of-sight (LOS) thickness of the material type. This information is included within the 40 characters of descriptive data in the region identification table. In the Command Post Carrier description, the last three characters represent the percentage of material, while the two preceding characters are a code indicating the material type. Table III lists the two-digit material codes used in this description and their assigned densities.

Table II. Sequential Identification Code Used in the Command Post Carrier Description

<u>Item Code</u>	<u>Usage</u>
0	Air and Dummy Regions
10-36	Personnel
70-99	Driver's Seat
101	Armor
201	Fuel Tanks
202	Fuel
203-209 223	Fuel Lines
1004-1207	Generator Components

Table III. Material Codes and Densities for the Command Post Carrier

<u>Code</u>	<u>Density (gm/cm<sup>3</sup>)</u>	<u>Material</u>
01	7.7641	Mild Steel
02	7.7641	RHA
03	7.7641	Face-Hardened Steel
04	7.2038	Cast Iron
05	2.7695	Aluminum (2024T-3)

Table III. Material Codes and Densities for the Command Post Carrier (Cont'd)

<u>Code</u>	<u>Density (gm/cm<sup>3</sup>)</u>	<u>Material</u>
07	8.9007	Copper
14	1.2166	Plexiglass as Cast
18	0.9356	Rubber
19	0.65	Hardwood
20	1.0000	Water or Personnel

The three tables, solid, region, and region identification, comprise a complete COM-GEOM target description.

### III. COMBINATORIAL GEOMETRY DESCRIPTION OF THE M577A1 LIGHT TRACKED COMMAND POST CARRIER

The M577A1 Command Post Carrier is a modification of the M113A1 Armored Personnel Carrier. The combinatorial geometry description of each carrier is similar for the tracked section and lower half of each vehicle, however, the vehicles have different upper structures and different geometric origins.

The M577A1 has its origin in a right-handed coordinate system. The X-axis origin is centered in the gunner's hatch of the vehicle with positive X direction forward, the Y-axis origin is the center-line of the vehicle with left (driver's side) being the positive axis, and the Z-axis origin is 71.81 inches above the ground and Z positive is upward.

Figure 3 depicts the coordinate system superimposed on a computer plot of an oblique view of the light tracked Command Post Carrier.

The complete COM-GEOM description consists of 1126 solids and 1126 regions. The Appendix contains a listing of the COM-GEOM description, where parts I, II and III contain the described solid, region, and the region identification tables, respectively.

### IV. VALIDATION PROCEDURE

One of the most important aspects of the description process is the

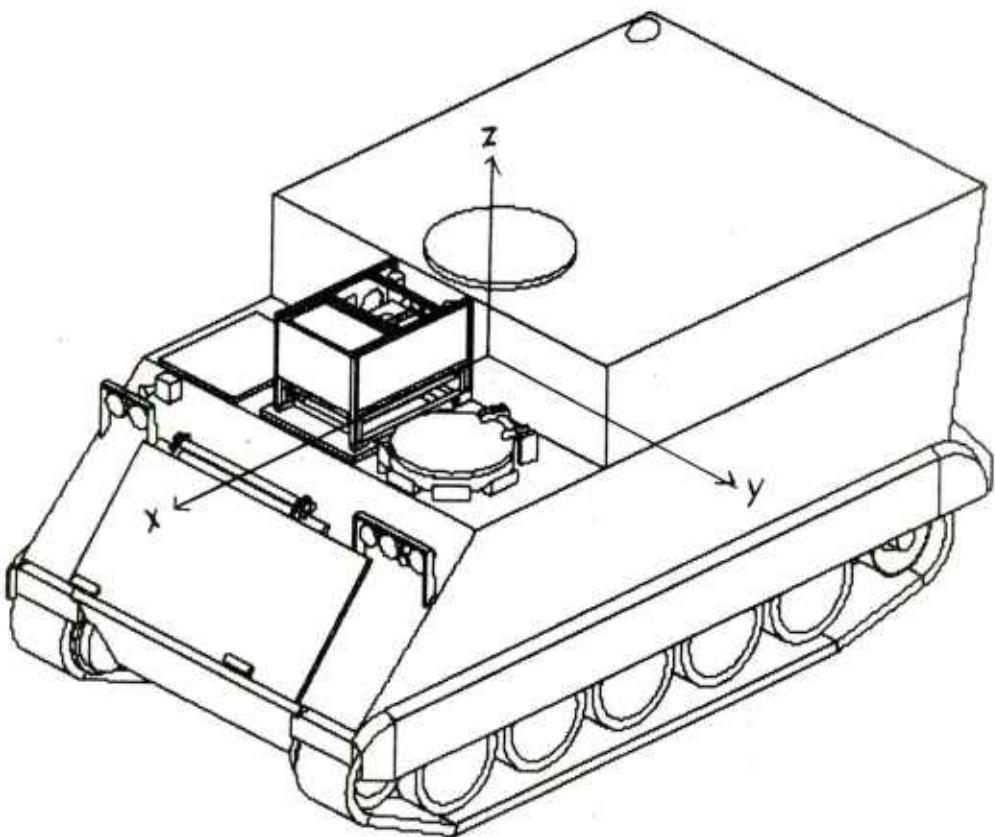

Figure 3. Coordinate System Superimposed upon an oblique view of the M577A1 Command Post Carrier.

validation of the target description. This procedure is extensive and frequently entails almost as much time as that devoted to describing the target. The Command Post Carrier description has undergone the following validation procedure:

The CHECK subroutine of the GIFT Code was utilized to identify overlapping regions. Any regions found overlapping, that is sharing a common point in space with any other region within a tolerance of .25 millimetres, were corrected.

A particularly important consideration in target description validation is the identification and elimination of unwanted voids or undefined spaces. The GRID subroutine of the GIFT code was used to examine this potential problem. GRID traces shotlines completely through a description from any desired aspect; it lists the line-of-sight (LOS) thickness, the normal thickness and the obliquity angle of every item encountered along each shotline. Once this information is obtained the location of voids become apparent. All voids found in the Command Post Carrier description have been eliminated.

Another step in the validation process is the production and examination of computer plots (scaled drawings) of the target description. These plots are produced by the PICTUR subroutine of the GIFT code. Figures 3 through 7 are examples of the plots produced by PICTUR. Numerous plots of the Command Post Carrier description were carefully examined and any observed errors corrected.

### USER EVALUATION OF REPORT

Please take a few minutes to answer the questions below; tear out this sheet and return it to Director, US Army Ballistic Research Laboratory, ARRADCOM, ATTN: DRDAR-TSB, Aberdeen Proving Ground, Maryland 21005. Your comments will provide us with information for improving future reports.

1. BRL Report Number \_\_\_\_\_

2. Does this report satisfy a need? (Comment on purpose, related project, or other area of interest for which report will be used.)  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

3. How, specifically, is the report being used? (Information source, design data or procedure, management procedure, source of ideas, etc.)  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

4. Has the information in this report led to any quantitative savings as far as man-hours/contract dollars saved, operating costs avoided, efficiencies achieved, etc.? If so, please elaborate.  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

5. General Comments (Indicate what you think should be changed to make this report and future reports of this type more responsive to your needs, more usable, improve readability, etc.)  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

6. If you would like to be contacted by the personnel who prepared this report to raise specific questions or discuss the topic, please fill in the following information.

Name: \_\_\_\_\_

Telephone Number: \_\_\_\_\_

Organization Address: \_\_\_\_\_
